                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              a
Submitted (10-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics. Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA ON MAY 10, 2003 this sequence version replaced gi:24942156. The sequence in this sequence version replaced gi:24942156. The sequence in this sequence combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlass (http://www.hgsc.ben.tmc.edu/projects/rat/). Rach coortig described in the feature table below represents a scaffold in the Atlass (http://www.hgsc.ben.tmc.edu/projects/rat/). Rach contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the setimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Center: Baylor College of Medicine

* NOTE: This is a working draft's sequence. It currently
* Consists of 21 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* This sequence will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone ands. Whote that the variation amonotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phread quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one MIS subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em; EMBL; Sw; SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP databases can be found at the WORMPEP databases can be found at the NORMPEP database can be found at the NORMPEP datab

Sequence from the Mouse Genome Sequencing Consortium whole genome
shotgun may have been used to confirm this sequence. Sequence data
shotgun may have been used to confirm this sequence.

Beguence data
a phred quality of at least 30.

On Oct 11, 2002 this sequence version replaced gi:21738139.

The sequence in this assembly is a combination of BAC based reads and whole genome shockun sequencing reads assembled using Atlas and whole genome shockun men-edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a contig easificated, Within each contig easificated, and separated by sized gaps filled with Ns to the estimated airs. The sequence only give a contig within a contig of the clone and there may be sequence contigs within a contig seaffold that consist entiraly of whole genome shockun sequence reads. Both and sequences and whole genome shockun sequence reads. Both end sequences and whole genome table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Veneral Court of the pitch of www.hgsc.bcm.tmc.edu/

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTE: Batimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html). NOTE: This is a "working draft' sequence. It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Submitted (07-PEB-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicins, One Baylor Plaza, Houston, TX 77030, USA 3 (bases 1 to 226911)

humquerydsanger.ac.uk Clone requeste clonerequestessanger.ac.uk
On Apr 7, 2002 this sequence version replaced gi:19011874.

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation amnotation may not be found in the sequence subrission
corresponding to the overlapping clone, as we submit sequences with
only as small overlap as described above.

This sequence was finished as followe unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., pixed quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one Mill subclone; and the
assembly was confirmed by restriction digest. The following
abbreviations are used to associate primary accession numbers given
in the feature table with their source databases: Bm: EMBL; Sw:
SWISSPROT; Ir:, TREMBL; Wp:, WORWEP; Information on the WORWEP;
database can be found at
                                                                                                            ALG26782 177264 bp DNA linear ROD 29-JUN-2002
Mouse DNA sequence from clone RP23-335N15 on chromosome X, complete
sequence.

```

```
onsists of 72 contigs. Gaps between the contigs are represented as runs of N The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced the finished sequence as soon as it is available and the accession number will be preserved.

Segister of the gap of 100 bp to 100 bp 
                                                             Center project name: L22336
Center clode name: 49 % 8 18
Assembly program: Phrap; version 0.960731
Centernais quality: 186564 bases at least 040
Centernais quality: 186010 bases at least 030
Centernais quality: 198001 bases at least 020
Insert size: 180000; agarose-fp
Insert size: 189951; amm-of-centigs

* NOTS: This is a 'working draft' sequence. It currently
consists of 5 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
it in so Known and their order of the gaps are unknown.

This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.

Direct Submission
Submitted (30-APR-2001) Sanger Centre, Hinxton, Cambridgeshire,
CBIO 13A, UK. B-mail enquiries: humquery@sanger.ac.uk Clone
requests: Clonerequest@sanger.ac.uk
Om Jul 1, 2000 Libs sequence version replaced gi:8346909.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Eukaryota; Metazoa, Chordata; Craniata; Vertebrata; Euteleostomi; Mammala; Eutheria; Primates; Catarrhini; Hominidae; Homo.                                                                                                                                          misc_feature
                  conteponding to the overlapping times, as we seemed a section only a small overlapping as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

BMI. SMRB. SWISSPROT; Tr., TREMBL, Wp., WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/Celegans/wormpep This sequence was generated from part of bacterial clone contiggs of human chromosome 6, constructed by the Sanger centre Chromosome 6 Mapping Group. Purther information can be found at HTDPLYNY: This sequence is not the entire insert of clone IMPORTANT; This sequence is not the entire insert of clone RPI1-373NX; It may be shorter because we sequence overlapping sections only once, except for a 100 base (overlapping the true right end of clone RPI1-373NX; is at 85592 in this sequence. This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were such a pasmid subclone or more than one Ml3 subclone; and the assembly was confirmed by restriction digest.

RPII-373NA4 is from the library RPII-11.2 constructed by the group of Pieter de Jong. RPI when the table details see
  corresponding to the overlapping clone, as we submit sequences with

Human DNA sequence from 4PTEL, Huntington's Disease Region,
chromosome 4p16.3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The true left end of clone 4PTBL is at 1 in this sequence. The true ight end of clone 4PTBL is at 118767.

FPTEL is contained in a clone contig spanning

HD which is described in Baxendale et al, Nature Genetics 4 ( 1993 181-186. See also Myers et al, Cytogenet Cell Genet. 66 ( 1994
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           õ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 / with the continuation of the consensus of the consensus of the complement (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (10.08 - 10.08) (1

This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ubmitted (23-WAY-1997) Sanger Centre, Hinxton, Cambridgeshire, B10 1RO, UK. BY021907 RINEN full-length enriched, mammary gland RCB-0527

Jyg-MC(B) cDNA Mus musculus cDNA clone G930019H06 5', mRNA
nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001) CDNA library was prepared and sequenced in Mouse Genome Broyelopedia Project of Genome Exploration Research Group in Rikan Genomic Sciences Canter and Genome Science Laboratory in Rikan. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.

```

```
Auman Genome Sequences Mamm. Genoms. 12, 673-677 (2001)

Normalization and subtraction of cep-trapper-selected cDMAs to prepare full-length cDMA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)

RIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 155-1771 (2000)

Computer-based methods for the mouse full-length cDMA cocyclopedia: real-time sequence clustering for construction of a nonredundant cDMA library. Genome Replaced in Mouse Genome Broyclopedia Project of Genome Suploration Research Group in Riken Genomic Stiences Center and Genome Suploration Research Group in Riken Genome Genome Genome Suploration Research in Riken Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.
